

## Product Description

Magnetic card reader is one of our main products. It's design and produced by ourselves. It's specially used for bank, commercial, post and securities etc. It's used for read and transmit information from ANSI/ISO magcard and deposit book. It's support two ways transmit and can connect to difference PC with USB interface

Feature:

- . Low power consumption, USB interface.
  - . ISO 7811 -7812 conformance.
  - . Reading triple tracks.
- Standard size.

|                       |  |                      |                        |
|-----------------------|--|----------------------|------------------------|
| Card standard         | ISO 7811 / 7812                                    |                      |                        |
| Card operation speed  | 10 ~ 150 cm/sec(210 DPI)                           |                      |                        |
| Interface             | usb  |                      |                        |
| Life time of head     | > 500,000 passes                                   |                      |                        |
| Power                 | DC 5V±5% (host)                                    |                      |                        |
| Decoding method       | F/2F   |                      |                        |
| Current               | Single track<br>3.5 mA                             | Dual track<br>5.2 mA | Triple track<br>7.3 mA |
| Operation temperature | -10 ~ 50 degree celsius , 15-85%RH, non-condensing |                      |                        |
| Cable length          | 1.5 m  |                      |                        |
| Weight                | 250g   |                      |                        |
| Dimension:            | 170X44X42mm  |                      |                        |
